"Clinical Effect of Psilocybin in Chronic Schizophrenics."

Praque, Activitas Nervosa Superior, Vol 8, No 4, Nov 66, pp 346 -  
347

Abstract: The effect of a single dose (0.15 mg/kg weight) was ob-  
served in 30 chronic schizophrenics. The drug had a strong ef-  
fect on 11, a slight one on 8 patients. 14 patients became  
relaxed after the drug was administered; in some patients it in-  
duced deep relaxation and could be used even for therapy. In 16  
patients the drug had a dysphoric effect. All showed catatonic  
traits in the clinical picture. 33% of the patients had optical  
hallucinations, 20% complicated ones. 7 Western, 3 Czech refer-  
ences. Submitted at the 8th Annual Psychopharmacological Meeting  
at Jesenik, 18 - 22 Jan 66, Article is in English.

"The Effect of Psilocybin in Chronic Schizophrenia."

Prague, Activitas Nervosa Superior, Vol 8, No 2, Jun 66, pp 222-223

Abstract: The effect of psilocybin was tested on 30 paranoid schizophrenics who had been sick for at least 15 years. In chronic schizophrenics psilocybin effect was substantially smaller than in normal subjects. Of the clinical pattern of psilocybin intoxication in healthy subjects, only involuntary laughter and euphoria were noticed in the patients. Optical phenomena, which are the most characteristic in healthy people, appeared only in half of the patients. Negativism alone was more frequent than in normal subjects. No references. Submitted at the 4th Conf. of Exper. and Clin. Study of Higher Nerv. Functions, at Mar. Lazne, 12-15 Oct 65. Article is in English.

"Attempts to Induce Tolerance to Tumor Grafts in an Alien Recipient."

Krakow, Folia Biologica, Vol 10, No 3-4, 1962; p 326.

Abstract [English article]: Condensed version of paper presented at the symposium on human genetics Warsaw January 1962. Review of the literature on immunologic basis of graft rejection. "In the immunological laboratory of the Polish Academy of Sciences and the Medical School in Krakow, the tolerance to heterotransplants of mouse sarcoma in hamsters was obtained by means of heteroparabiosis. The temporary joining of mice and hamsters in parabiosis by coelioanastomosis in some cases caused the acceptance and growth of sarcoma grafts in parabiotic hamsters."
